Zip helps Apache North Sea reduce plastic bottle waste from its Aberdeen headquarters

**Location:** Aberdeen

**Client:** Apache North Sea

**Sector:** Commercial

**Product:** HydroChill HC20

## The brief

- A drinking water system that supports the company's sustainability strategy, including reducing single-use plastic waste across the office.

## The solution

As part of their waste management and environmental strategy, Apache North Sea wanted to reduce their single-use plastic waste - driven by the purchase of over 12,000 bottles of water in 2018. Seeking a mains-fed drinking water system with high filtration that they could use in place, they chose to install a HydroChill HC20 dispenser, capable of delivering 80 litres or 106 750ml bottles of water an hour.

## The results

"The Zip HydroChill has transformed water consumption across our office. Within two months of it being installed, the sale of bottled water and our subsequent single-use plastic waste decreased by 48%. The feedback from our workforce has been extremely positive and we expect this trend to continue."

Stephen Duncalf, Supply Chain Manager  
Apache North Sea
